--------------------------	----

Swedish quality since 1950

The ASKO story is a good one. It started back in 1950 in Vara, Sweden, with an innovative young man's dream to build a washing machine for his mother to make her life easier. A unique energy and water-efficient machine that would reflect a farmer's love for nature. One with superior cleaning performance and reliability that could heat water and spin, and even had stainless steel drums that were both durable and reliable.

Today, more than 60 years later, ASKO has become a global brand that designs and develops premium kitchen, laundry and professional appliances. Our products meet the most stringent demands for design, function, durability and environmental awareness. We manufacture our products to extremely high quality standards and build our domestic products in the same way we build our professional products.

In practice, our quality procedures mean that we test ALL products before they leave the factory. Any machine that fails to pass our grueling tests never leaves the factory. We have been an ISO 9001-certified company ever since 1995.

A fresh start for generations to come

For us at ASKO, environmental considerations are not just important, they are vital. And they have been for over 60 years. The first ASKO products were developed and manufactured by farmers, who love nature and know how to take care of it. We work in this very same tradition today, with a focus on minimizing our ecological footprint. For us, our heritage is also our future - a fresh start for generations to come.

No. 1 in environmental friendliness

We are the only brand of washing machines and dishwashers in the world to be awarded the Swan mark, the best known Nordic Ecolabel for healthy and environmentally friendly products. It indicates that certified products meet very stringent environmental and quality requirements. You only see the Swan mark on brands that take the environment seriously. Furthermore, we have also been an ISO 14001-certified company since the year 2000.

Water is our favorite fuel

Our passion for cleanliness comes from our relationship with water. We quench our thirst with it, we use it to produce our electricity and we enjoy it in our beautiful archipelagos. Perhaps that is why we take such good care of it in our business and develop products that consume as little water and electricity as possible.

Dishwashers

Scandinavian design

The combination of everyday functionalism, environmental concern and clean, pleasant lines is the principal hallmark of Scandinavian design – and that of ASKO. The fundamental idea is that carefully designed products should improve people's quality of life. To distinguish ourselves in a market of cluttered, complex and voluptuous designs, we aim for a soft, humanistic minimalism based on the principle of quiet being the new loud.

Our design philosophy

The key elements of Scandinavian design – understated elegance, high-quality craftsmanship and natural materials – are reflected in ASKO's design language. Much emphasis is also placed on functionality. We strive to make life easier by offering truly user-friendly interfaces, integration of practical functions and trouble-free, durable products that please people for a long time.

Inspired by everyday life

Our goal is that our products should make your everyday life simpler. That is why we have worked so hard through the years to develop the market's largest and most flexible basket systems. This time, we have been especially careful to first find out what people really put in their dishwashers. We then translated our newly acquired knowledge to a range of unique, innovative and practical basket solutions.

What makes a dishwasher an ASKO?

Our goal is to ensure our dishwashers make your everyday life more simple. At ASKO, our years of experience and extensive research allow us to offer dishwashers with the greatest flexibility and largest loading capacity. We also use more steel in our racks than any other brand which makes our racks the most stable and durable in the market. Now we are taking it one step further by introducing a new model lineup with exceptional new features and product enhancements.

Twin Tubes™ connectors designed with automatic non-return valves

Each basket has its own rinsing system, such as the middle basket where we are now introducing Twin Tubes™ with a flexible spray loop for the left or right sides of the middle basket.

Extra-wide knife supports and knife guard

Our knife holder is extra deep so that the blades remain steady throughout the wash cycle.

Ergonomic with integrated handle

This makes it smooth and simple for everyone to use. And it is more sustainable.

The top basket has its own stainless steel spray arm for optimum washing results

ASKO's spray system is highly effective which ensures that the whole load gets totally clean. Steel is harder and sturdier than plastic.

Smooth and quiet telescopic sliding rails

Our rails glide on ball bearings to create a smooth rolling action, that prevents items in the baskets from moving for first-class protection and utility.

Detachable and removable basket inserts

Our top tray includes its own stainless steel spray arm and capacity for sixteen sets of cutlery, small bowls, and other difficult to load utensils. The top tray design is optimized to make room for taller glasses in the upper rack and if even more space is needed, simply remove the top tray insert completely.

Think big, think smart

You'll like the way an ASKO dishwasher looks in your kitchen, but you will love it because you can load it with more than any other dishwasher on the market. That is not just because it has a bigger interior than its rivals but also because of the smart and convenient three-level rack system that makes loading easier than ever.

41 dB (A)

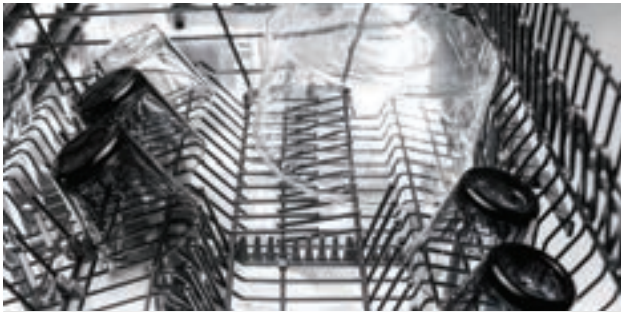

Silent partner

Your kitchen is not just a place for cooking but also for socializing. That is why our dishwashers are among the quietest on the market. Normal noise level is around 60 dB.

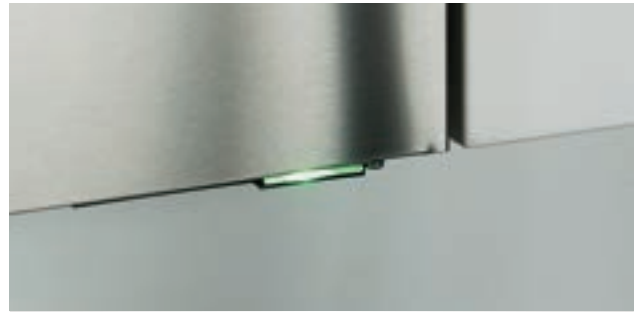

The world's largest loading capacity

Actually, 40% larger than a standard dishwasher. With the improvements we have made in our rack systems, we go from being the world leader to the best in the world. Our XXL dishwashers can wash up to 17 place settings with perfect results.

Divisible to double your loading options

The tine rows and glass supports are needed to ensure that your china dishes remain safe while being washed. But sometimes they can be in the way. This allows you to load different items in the same row by adjusting the tine row angle.

We've replaced noise with color

Your ASKO dishwasher is so silent that we had to design a convenient feature: the Status Light™. Blue tells you when you can still open the door to load more items, red tells you when it's too late to do so and green tells you when the dishes are ready. Brilliant and typically ASKO.

Touch Proof™

Thanks to Touch Proof™ you no longer need to worry about greasy fingers all over your stainless steel appliances. The microscopically thin transparent coating makes the surface resistant not only to greasy fingers, but also a range of other marks and stains. The surface is easy to clean, scratch resistant and will keep your appliances shiny year after year.

Hygiene program for deep cleaning

The hygiene program is ideal for cleaning baby bottles, preparing jars for food preservation and removing odors from cutting boards. The temperature is raised to 158° F in the main wash and final rinse programs to prevent growth of bacteria.

Top basket with top performance

The latest addition to our basket system is a flexible top basket with its own spray arm and space for sixteen sets of cutlery, small bowls, or other utensils that can be difficult to load. The design of the top basket has been optimized to make room for tall glasses in the upper basket and, if more space is needed, simply take the top basket out.

Instant Lift™ - smart height adjustment

With our unique Instant Lift™ height adjustment system, you can adjust the top basket to higher or lower positions and free up more space in the upper basket through a simple operation. In the raised position, the space is 1½" and in the lowered position it can be up to 2¼". Simple, smart and flexible.

Multifunctional upper basket for all types of dishes

Our exclusive upper baskets can be any way you want them. Place wine glasses in the folding and detachable wine glass holders. Put plates in the plate rack or fold down all the support and load the entire basket with gratin dishes. Fold up all the support once again and fill with just glasses.

Plate supports that can be adjusted to different sizes

If you need more space in the baskets below, the rows can be adjusted to accommodate different size plates. Flexibility and total freedom from ASKO.

Middle basket for objects that can be hard to place

We have created the space for dishes that are too small or irregular for the lower basket or take too much space in the upper basket, such as breakfast bowls, ladles and whisks. No matter how you define 'hard to place', you will always find a spot for it in our unique and practical middle basket.

Lower rack with maximum freedom of choice

The exclusive lower basket in an ASKO dishwasher is also the most flexible and stable in the market. Because all of the parts in our basket are made from high quality steel, we are able to create flexible basket solutions that are extremely durable and easy to use.

Cutlery basket

Our cutlery basket features roomy sections for easy sorting of your cutlery. This clever design allows your forks and knives to dry much faster by eliminating water collection. In addition, the cutlery basket can be placed anywhere on the lower rack.

A strong lower basket that protects

The exclusive lower rack in an ASKO dishwasher is one of the most flexible and stable in the market. Because all of the parts in our rack are made from high quality steel, we are able to harness the strength and stability to maximize capacity and protect delicate dishes. Our exclusive racks have maximized flexibility with divisible and foldable tine rows everywhere. The adjustable tine rows ensure you can safely wash both small dishes and large plates measuring up to 15 ¾" in diameter.

To improve our dishwasher performance even further, we now include two separate high-pressure Power Zones™ for the lower rack: Wide Spray™ for extremely effective washing of pots and pans and Jet Spray™ for tall, narrow objects such as baby bottles or vases.

No rinsing required

Most people spend a lot of time rinsing their plates and bowls before placing them in the dishwasher. Those days are gone because ASKO dishwashers have an SCS™ (Super Cleaning System™). This means you save time, water, energy and effort because the machine takes care of the rinsing for you.

Nordic light

There is a small yet highly effective LED light in your dishwasher. It comes on when you open the door and lights up the whole machine. It makes loading and unloading simpler, and makes it easier to find any cutlery or other items you may have dropped inside.

Excellent performance with Twin Tubes™

ASKO's dishwashers are renowned for their exceptional washing results. The secret is our carefully designed and tested rinsing system with 9 spray zones. Each basket also has its own rinsing system, such as the middle basket where we are now introducing Twin Tubes™, with a flexible spray loop.

Turbo Drying+™ dries quickly and efficiently

With a 25% increase in airflow, the enhanced ASKO drying system gets every load completely dry. After the final rinse, the moist air inside the dishwasher is mixed with the dry air outside of the dishwasher which dries dishes, glassware and cutlery completely. We call it Turbo Drying+™.

Light Lock™ for lightweight objects

The problem with washing these types of lightweight objects in a dishwasher is that they easily turn or move because of the water from the spray arms. We have solved the problem by introducing Light Lock™ which anchors all types of light objects.

Two Power Zones™ for additional dish washing power

Introducing two separate high-pressure Power Zones™ for the lower basket: Wide Spray™ for extra efficient washing of pots & pans and Jet Spray™ for washing of tall, narrow objects. The result is efficient cleaning of really dirty dishes.

Tubular Handle

Pro Handle

Options to match your kitchen

You can customize the door of your ASKO dishwasher to match virtually any kitchen design, from wood to stainless steel and beyond. Both Pro and Tubular handles are available as accessories.

Laundry

King size in the laundry room

Despite our 60 years in the industry we cannot help but marvel at people's laundry habits. Almost everyone we meet complains about how much laundry they have and that they never have time to wash it all before the laundry basket is filled with even more dirty laundry. Some even invest in two washing machines.

The ASKO Pro Series™ washers and dryers are designed to deal with this situation and moreover, with the 2.8 cu. ft. drum that can load up to 24 lbs., you can wash items that you normally can't do like kitchen rugs, pillows, large blankets or duvets.

After the washing is done you put the whole wash load in the dryer which can take as much as 24 lbs. in its 5.1 cu. ft. drum.

Washers

If it moves it's not an ASKO

For us at ASKO, washing is not just having all the laundry perfectly clean. Since washing is an everyday activity it must also be as convenient and as easy as possible. That's why we try so hard to come up with clever solutions to make your everyday tasks so much easier. For example, our washers have no rubber bellows to make loading and unloading incredibly easy. To make the best of the time you have

available, we have designed a special Time program giving you the possibility to decide how long you want to spend waiting for the washer to finish. And as a last example of our lateral thinking, all our washers handle high spin speeds virtually without moving. Comfort and quality - this is ASKO.

If you want to be sure your laundry gets really rinsed

To improve the rinsing result the best solution is to increase the number of rinses (and not just use more water). That's why an ASKO can rinse away all residual detergent. A must for people with sensitive skin and allergy sufferers.

Easy-to-use interface

Although the technology in an ASKO Pro Series™ washer is very advanced, it's also very easy to use. For example, the machine has a program memory which remembers the last used program. Next time the machine is turned on, just press start.

Clean laundry and clean conscience

Being a considerate company, we try to preserve more than just your clothes. This is why all our washers are energy efficient. It's also why we spend so much effort to minimize water consumption using Sensi Save™, which adjusts the amount of water according to the weight of laundry.

Ready when you want

Using the Time program you can always wash as clean as possible in the time you have available. With this program you decide how long you want to spend waiting for the washer to finish – from 30 minutes to 3 hours. Flexible, smart and time saving.

We know you don't run a hotel. But your washer doesn't.

When we build a new washer we try to imagine how you will use it in the hardest case scenario – and then we multiply it many times which means we test it up to 10,000 hours, equal to around 20 years of domestic use. It is designed exactly the same as if it was to be used in a hospital, a restaurant or some other tough environment.

One example is our unique Quattro™ construction with four shock absorbers which ensures maximum spin speed for many years to come. Quite simply, we build our domestic products to the same standard as our professional products.

Maximum effect, minimal wear

Our Active Drum™ provides optimum care and maximum gentleness. The design of the drum, in combination with the hourglass-shaped paddles, allow the laundry to move to the center. The paddles also guide larger “objects” to the bigger evacuation holes in the paddle edges, which effectively removes dirt from the machine.

Easier loading without rubber bellows

Thanks to the Smart Seal™ construction, the door takes up less space in the washing drum, making it possible for you to load more clothes. We don't have the traditional rubber bellows in the opening, which makes it easier to load and unload the machine. The Smart Seal™ also lasts longer.

When the going gets tough, the steel keeps going

A washer must be able to withstand both high temperatures and high spin speeds. Plastic is simply not good enough. Stainless steel in both inner and outer drums is the best and that's what we use.

Why your ASKO is sturdier and quieter than other washing machines

We reinforce and stabilize our washing machines using four shock absorbers and counterweights made from cast iron instead of sheet metal and concrete, which is the solution often used by other manufacturers.

ASKO power!

ASKO washers have induction motors without carbon brushes. This robust motor ensures that the machine copes with the highest spin speed, reduces noise levels and also increases the service life of the machine.

Speed is good for your laundry

When it comes to drying that is. Actually the faster the better, because high spin speed means less residual moisture in the washing load. ASKO washers are extremely fast, operating at up to 1400 rpm, which means that you will save energy when drying your laundry in the tumble dryer.

There's more to drying than just drying

The ASKO dryer uses a unique non-stop Butterfly Drying™ system, which is the most efficient way of protecting clothes from wear. In addition to this, our tumble dryers also offer short drying times and the lowest energy consumption possible. The largest tumble dryer we offer can handle 24 lbs. of laundry without bundling or creasing,

which in the long run means less ironing. There are three different types to choose from: heat pump dryer, condenser dryer or vented dryer, all to fit your needs, and each have a load capacity from 3.95 to 5.1 cu ft. And to make your laundry room nicer, they all come perfectly co-designed with the washers in the Pro Series™ or Family style sizes.

Tumble Dryers

Dry facts and clever features

When buying a new dryer, don't be too modest. Bigger is, in this case, better. It's a fact that the larger the drum, the more air, the shorter the drying time and the smoother the drying cycle. The large 5.1-cu. ft. is able to dry a 25 lb. wash load perfectly, minimizing bundling and creasing in your laundry. You won't regret it.

Non-stop Butterfly Drying™

Our dryers tumble dry laundry in a figure eight, like a pair of butterfly wings, gently, non-stop and in less time, without the clothes bundling. This also saves both the belt and the motor, providing greater durability.

Eight good ways to dry your laundry

The auto programs are not only convenient to use, they also save energy as the running time is adjusted according to the amount of laundry or how dry you want the load to be. There are eight efficient auto programs to choose between: Jeans, Synthetic, Terry, Down, Iron dry, Dry, Normal Dry and Extra Dry.

Just press "Start"

All ASKO Pro Series™ tumble dryers have robust and easy to use interfaces. The program memory automatically remembers the program that was previously run, including any settings. So it's just a matter of pressing Start the next time. Just dry it!

We spent a lot of energy saving yours

Our heat pump dryers have low energy consumption. They only consume 0.18 kWh/kilo of power. In combination with our Sensi Dry™ system, energy consumption is lowered even more.

Not all laundry needs washing

A perfect program if you just want to freshen up your clothes or get rid of hair left behind by your beloved cuddly pet. The Air Fluff program tumbles garments in cool air for the amount of time you set.

Your tumble dryer knows when your clothes are dry

Our unique Sensi Dry™ system gauges remaining moisture and automatically stops once the clothes are dry. Not a minute longer. This saves energy.

Dry like a professional

We don't think it's overkill that every component in a new ASKO dryer is tested to last for at least 20 years. The fact that we use a ball bearing construction, stainless steel drum and double lint filter seems perfectly natural to us. And we know they will work because we test the domestic

appliances just as hard as we test the products for professional use in hospitals, hotels or restaurants. You can trust your ASKO – it's built like a professional.

It simply means welcome

It won't change your life, but we think it's nice if you can see what you're doing. That's why a friendly light comes on when you open your dryer.

Leave the dirty work

ASKO's heat pump dryers come with an automatic self-cleaning filter that eliminates the need to remove lint from the condenser filter. To make it even simpler, we've also made it possible to connect the water tank to the drain. This together with the self-cleaning filter is an ASKO unique combination.

Fits like a glove

There is always the perfect spot for your ASKO tumble dryer. The reason why we are so sure is the flexible installation. You can place it in a stack with your matching ASKO washer, or you can place them side by side.

Twice as tough on lint

Lint impairs circulation inside the dryer, which leads to higher energy consumption. This is why our dryers come with a particularly efficient double filter. This prevents lint from gathering and increases the service life of the dryer.

A steel hard fact: it lasts longer

Sooner or later, galvanized steel rusts. That's why we decided to make our drums out of stainless steel. And that's why our tumble dryers really do last longer. In addition, we construct the drum using three ball bearings rather than the far simpler plain bearings that do not have the same life span or stability.

It'll keep your servicer away

The motor in your new ASKO tumble dryer will not break down. Want to know the secret? It's because we have equipped our tumble dryers with strong and very long-lasting brushless motors. The key word here is "brushless" because brushes wear out and when there aren't any...The only thing you will need to change in your tumble dryer is the wash load.

Hidden Helpers™

Once you've discovered them, you can't live without them

We know that there is a high demand for functional solutions when it comes to storage and folding space in a laundry room. Our Hidden Helpers™ are simple but smart inventions that are always handy and will make your laundry

life much easier. Each Hidden Helper™ is co-designed with our washing machines and tumble dryers. They are all part of the ASKO modular system, preserving the chosen design and function.

Laundry Care double
HDB1152 W
HDB115 T

The Swiss army would have loved it!

Comes with a wire basket and pull-out shelf. It can be used as a general purpose surface, additional surface space when folding clothes and sorting socks, or for storage. We call it laundry care double. The basket can be used to carry your clothes to the wardrobe.

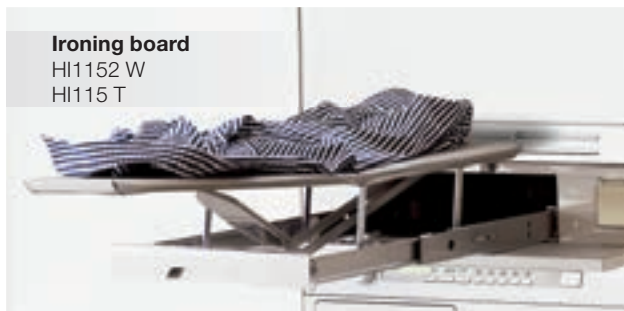

Laundry Care single
HSS1052 W
HSS105 T

At your service

It's a pull-out shelf that makes loading and unloading your laundry so much easier. You'll be surprised how handy it is. We call it laundry care single.

Ironing board
HI1152 W
HI115 T

Your laundry room just got bigger!

Do you have problems finding space for your ironing board? Have you looked between the washer and the dryer? We have! Right there is a simple yet self-evident and well-considered solution that is always handy when you need to iron your clothes, but safely and invisibly stored away when not in use.

Laundry Care basket
HB1152 W

A handy basket in a good looking package

Our pull-out basket is easily accessible from the dryer, and has a push-pull door opening with a large removable rack. This is a solution, which is useful for removing laundry and carrying it to the wardrobe or workbench for ironing and folding.

Platform
5860003 W
5860004 T

Easy loading solution

ASKO's laundry platform is specifically designed to elevate your washing machine or dryer by 12", making loading or unloading easier.
